

Stokman Angus

YEARLING BULL AND HEIFER SALE

Wednesday 17 September 2025 1 p.m.

New in 2025!!! Available on our Bulls two new EBVs

- **Mature Body Condition (MBC) EBV:**

This EBV estimates the genetic differences in body condition of mature fe-males. Higher MBC EBVs indicate that an animal is expected to produce daughters with better body condition as mature females, expressed in BCS units.

- **Mature Cow Height (MCH) EBV:**

This EBV estimates the genetic differences in the height of mature females. Higher MCH EBVs indicate that an animal is expected to produce daughters that are taller as mature females, expressed in cms.

By using these EBV's, you can get an idea of the size that the mature animal will be in body condition, or in height. In the past, you had no idea if the ani-mal would be compact with a lot of thickness, or tall and leggy at maturity from their EBV's. We believe these are two very valuable EBV's for the NZ cattle producer.

**Proud to be
supporting
the rural
community**

We will be donating all proceeds in our 2025 Sale from Lot 111, Stokman Resilient V321, out of one of our top cows Stokman Donna H40, to the Greenlea Rescue Helicopter.

133 Bulls and 40 Heifers Sell

Sale on farm - 1708 Te Kopia Road, Waikite Valley, Rotorua

Welcome to our Annual Yearling Bull and Heifer Sale!

On behalf of Mark, Sherrie, Jake and Lexie we would like to welcome you all to our annual Spring Performance Sale.

2025 has thus far been one for the record books with cattle prices at an all time high. We have never seen anything like this in our lifetime, and looks to carry on for the next few years at least. NZ beef farmers produce a delicious safe sustainable product, and I do believe the world has recognized that and wants real food. Not fake meat. What a great time to be a beef producer.

On Wednesday, September 17th we will be selling 133 Yearling Angus Bulls and 40 Yearling Replacement Heifers. This will be one of the largest yearling Angus sale in NZ this year, and offers a great opportunity to improve your genetics with the bulls and heifers for sale.

The first point of profit is a live calf, and we excel in producing calving ease, short gestation sires, with above average growth and carcass merit. With our herd stacked with calving ease, we seldom pull a calf on the farm. This year we have only pulled a full breech calf out of a heifer, and are sitting over 105% with our live calving percentages.

Angus cattle have been in our DNA for over 100 years, with Sherrie's family ranch, Sitz Angus, reaching the milestone of 100 years producing Angus bulls in Montana. For us, raising cattle is a way of life we enjoy, but we also take it very seriously. The cattle you purchase today are an investment in genetic progress in your herd, and for you to get the most potential out of your investment, we work hard to provide the most accurate data we can.

We HD50K DNA testing every registered calf born on the farm for genomics and parent verification. We docility score at weaning and fertility test every bull that goes through the sale. A first this year, we body condition score and height measured the dams after weaning, to get information about the makeup of the animal. Is the cow a tall rangy animal or is she a moderate well fleshed easy keeping cow. We feel that this information is going to be very valuable for the commercial farmer.

The 133 bulls in this catalogue are the most uniform group we have raised, and are sired by some of the most proven leading sires in the Angus breed. We value temperament, and have had amazing feedback on how easy our bulls are to work and handle.

The 40 heifers have been selected from the registered herd, but sell without transfer. They share the same sires as the bulls, and will sell in pens of 10. Ebv's and Indexes will be available on each pen sale day.

We have continued to thrive in our relationship with Angus Australia, and they are continuously developing new EBV's and indexes, that will improve our cattle selection. If you have problems accessing our data on Angus Australia, please don't hesitate to give us a call so we can help.

Thanks to Craig and Courtney Moyes who have been a very important part of our team for seven years. Craig and Jake work together very well, and this has given Mark time to be able to achieve all those little jobs that keep things running smooth. If you enjoy the native gardens at the salebarn, Courtney keeps things looking stunning and works with me with the wedding and functions at the Stokman. Lexie is full time employed with the Govt Apprenticeship program, but is always there to help Jake on her days off, and we appreciate how much she loves the farming life.

We look forward to seeing you on September 17h. If we can be of any assistance, please let us know. The coffee pot is always on if you are over our way.

Mark, Sherrie and Jake Stokman

Jake, Sherrie and Mark

Becca and Cam

Courtney, Craig, Bayden and Lachie Moyes

16th ANNUAL YEARLING SALE

Wednesday 17 September 2025

At the farm - 1708 Te Kopia Road --- 1pm --- Waikite Valley, Rotorua

FOR SALE:

133 Yearling Angus Bulls | 40 Yearling Commercial Angus Heifers

~ Morning tea and lunch provided ~

Inspection of Bulls from 10:30am on sale day or prior with arrangement.

Catalogue can be viewed online at **Stokman Angus Farm** on our website,
on Stokman Angus on facebook or Angus Pro.co.nz

BBSE - Bull Breeding Soundness Evaluation

The bulls listed in this catalogue have met the following parameters that are required to pass the Tararua Breeding Centre Bull Fertility Evaluation carried out on behalf of:

Stokman Angus on 27th August 2025

The bulls listed in this catalogue have been evaluated using the electro-ejaculation or manual manipulation technique by Tararua Breeding Centre and have had the semen assessed by a certified morphologist

SEMEN EVALUATION

Each bull's ejaculate, which is collected by electro-ejaculation or manual manipulation technique, is examined microscopically by a certified Morphologist for Density, Motility, Morphology and must pass the minimum standards of 75% normal at the time of testing.

Signed:

Lucas Reina

EVERY BULL SELLING IN THIS SALE IS FERTILITY TESTED

- make sure the bulls you are purchasing are.
Many are not!

Fertility testing is a cost-effective way to proactively prevent situations of bull failure – a significant cause of dry cows, with up to 10% of yearling bulls being either infertile or subfertile.

Lucas Reina, Tararua Breeding Centre, has taken over from Guy Haynes fertility testing the sale bulls. Have a chat to Lucas on sale day with any questions on fertility testing.

The Benefits in Using Yearling Bulls in Your Breeding Program

Faster Genetic Gain – Source the latest and best genetics a year earlier. You can select for desired traits like calving ease, faster growth rates, improved feed efficiency and carcass quality at a faster pace.

Extended Bull Working Life – Yearling bulls are more agile and fitter, and can extend their productive life, reducing the cost per calf.

Lower Bull Costs – Yearling bulls are cheaper to purchase than older bulls. Due to their younger age and leaner body composition, they require less feed for maintenance compared to mature bulls. There is evidence that bulls used first as yearlings have even longer working lives because of superior fitness and lower levels of body fat. The more active lives of these bulls means that they are maintained at body

weights below their genetic potential. As a result, less stress is placed on their skeletal structure when serving, with less likelihood of breakdowns occurring. But do remember proper management is crucial to maximize their potential. And an ideal size for yearlings is 25 to 30 cows per bull.

Easier Management – Yearling bulls are easier to handle in yards and paddocks, mix with other bulls better, and adapt to your environment quicker. Big heavy 2 year olds can damage cows, or crash and lose a lot of weight if they were fed up before sold. Buying a big fat bull doesn't equate to good genetics, what you see is not always what you get. Look at the EBV's, it's been proven time and again, accurate EBV's do work.

Bringing your new bull home

ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

Conditions of sale

1. The sale will be conducted under the usual conditions of NZ Stock Station Agents Association.
2. All intending purchasers are required to register at the sales office prior to the sale.
3. A rebate of 5% will be paid to non-participating livestock companies and agents with approved credit facilities to introduce and/or accompany buyers to the sale. Arrangements must be made with the auctioneer prior to the sale, and settlement made on the buyers behalf within 14 days of sale.
4. This sale will be conducted purchased price plus gst.
5. Each lot shall be at the risk of the purchaser at the fall of the hammer.
6. Retained Interest – Stokman Angus retains a 30% semen share and 30% share of any semen sold on all bulls sold at the sale.
7. Any bull sold requiring a transfer for use in a registered herd will be at a minimum price of \$15,000 plus gst and any associated transfer costs will be charged to the purchaser. The purchaser or agent must state at the fall of the hammer if a transfer is required. For any animal transferred to Angus NZ members, the cost of all fees and genetic tests charge by Angus NZ to import and register the bull from the Australian database will be shared equally between the purchaser and the vendor.
8. All cattle become the purchaser's responsibility at the fall of the hammer. Bulls that qualify for the FMG approved insurance will automatically be insured for 14 days through the FMG Premier Bull Insurance Coverage, and we do recommend you talk to the FMG team about purchasing the additional 50-week insurance for your peace of mind.
9. Purchasers are requested to please completely fill out the Purchasers instruction Slip at the back of the catalogue, and hand it to the PGG staff at the end of the sale.

Health Status – Stokman Angus has a C10 status.

Bulls – BVD Negative, BVD, Lepto and Covexin vaccinated

Heifers – Lepto and Covexin vaccinated

All animals will get an abamectin drench prior to the sale.

All bulls in this sale are free of known genetic disorders. They are AM, NH, CA and DD Free or Free Untested.

Trucking - We will organize the trucks to deliver the bulls at the buyers expense, and will work to organize them as efficiently and least costly as we can.

OSH – Every effort will be taken by us, our staff to ensure the safety of attending buyers and visitors. However, cattle can be unpredictable, particularly if stressed, mobbed up or in a new environment. Please exercise all reasonable care and attention when viewing the cattle.

HEALTH AND SAFETY

Complying with the Health and Safety in Employment Act 1992 and Health and Safety at Work Act 2015 we are required to advise people of possible hazards. Please be aware of these prior to entering the property to ensure your personal safety.

- Cattle can be unpredictable, especially toward children.
- No children under the age of 15 allowed in the inspection yards.
- Move quietly, be vigilant at all times.
- Wear appropriate footwear and be careful of slippery surfaces.
- Be aware of vehicles and machinery.
- All possible care has been taken in arranging the sale seating, but caution in attaining your seat is still necessary.
- All footwear is to be rinsed in available disinfectant when arriving on the farm.
- Thank you very much for your cooperation! We hope you enjoy the day.

Our bulls are known for their quiet temperament.

Wishing Mark and Sherrie a successful sale

Your NAIT birth tag requirements conveniently matched to a TSU (Tissue Sampling Unit). Allflex easy-to-use tissue sampling gives you accurate DNA parentage.

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

This sale will be hosted by bidr® (bidr.co.nz) as a HYBRID ON-FARM auction, with online bidding and a live-stream available for online purchasers.

All intending online purchasers must register with bidr® using an account held with one of the bidr® partner agencies in advance of the sale date.

The bidr® team is available to assist intending purchasers with signing up and registering - please call 0800 TO BIDR (0800 86 2437), or email enquiries@bidr.co.nz for assistance at any point.

Our Breeding Philosophy . . .

With Sherrie coming from an Angus stud in Montana, where cattle thrive in conditions from -40 degrees C to 38 degrees C, and ranging in elevation up to 2900 meters, we source genetics that focus on the practical traits, ones that make you money.

Our herd is built on good mother cows. Emphasis on the female is of the utmost importance, as the quality of the female is the key to a successful breeding program. Our cows go back to some of the great pathfinder sires of the Angus breed, known for producing outstanding females. Stokman cows must have the right combination of femininity, fertility, mothering ability, with a moderate frame size with volume. We cull any cows that have temperament issues, and this has led to us having a reputation of very quiet bulls in our sale.

All the cows calve as two year olds, and have to be in calf every year. We won't be swayed to use a bull with just good carcass numbers if we don't have confidence in the female side of the pedigree.

And good cows produce good bulls. The bulls will be gone in a year, but the females stay on as our "Factory".

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Maternal	MCH	cm	Genetic differences between animals in the height of mature females.	Higher EBVs indicate taller mature females.
	MBC	score	Genetic differences between animals in the body condition of mature females.	Higher EBVs indicate more body condition of mature females.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate less curl of the claw set.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more heel depth.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a less angular leg angle.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcase weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate eater profitability.

Supporting the service that supports the rural community.

Stokman Angus is donating 100% of the proceeds from Lot 111 to the Greenlea Rescue Helicopter, and thanks to PGG Wrightson for donating 100% of their commission as well.

Mark had a canam accident in March of 2024 and is still recovering, but thanks to St. Johns Ambulance, the Rescue Helicopter and their amazing crews, he is around to tell the story. And this isn't the first time the Rescue helicopter has visited our farm. Mark had a major heart attack in 2014, and was airlifted to Rotorua, then Waikato Hospital. The Rescue Helicopter isn't just the fastest option for life-threatening emergencies in rural areas. Sometimes, it's the only option.

We thought it appropriate that Lot 111 would be the bull to donate. Stokman Resilient V321 is an ET bull out of one of our oldest cows, Stokman Donna H40 and Sitz Resilient. H40 is still going strong in the herd at 13 years of age. We have retained every heifer out of her in the herd, and she has produced herd sires selling to Stern and Mautauri Angus.

Lot 111 will sell right after Lot 35.

Stokman Donna H40, Dam of Lot 111

YEARLING BULLS - BEST VALUE FOR YOUR MONEY

Here at Stokman Angus, it's our duty to provide our clients with bulls that are improving year on year. Every bull in our sale is HD50K genomic tested and parent verified.

A decade ago, farmers were concerned about buying yearling bulls as the data was not as reliable or proven as a two year old bull. Genomic testing has changed the game, with hugely improved accuracy. We have found our EBV's, as the bulls age do not vary much from what is in our sale catalogue, if anything they tend to improve. It helps that we use proven herd sires with high accuracy.

Yearling bulls rule the pastures here, and if you grow them well, they are a very profitable and valuable tool for the commercial beef farmer. This year with cash flow being tighter on farms, yearling bulls tend to be more affordable for the same or better genetics. They can be used on heifers or cows if well grown, are easier to handle, you can purchase them closer to breeding time, and generally can produce more calves over a longer working life.

Growing the bulls in the right manner, and making sure they are sexually mature is something we do well. We fertility test all our yearling sale bulls, with very few failing to pass by sale time.

IT ALL STARTS HERE!

Accurate birthweights and HD50K tissue samples are taken daily during calving, and having quiet attentive cows make weighing and tagging the calves a pleasure.

Choose Te Pari for a **COMPLETE SOLUTION**

When you buy a Te Pari, you aren't just buying a piece of equipment - you're buying a solution. Think...

HANDLE WEIGH IDENTIFY DOSE

Te Pari equipment and technology works together to improve your farm efficiency and productivity. Plus the Te Pari Macrostock Scale integrates with FarmIQ!

Talk to Leon today to discuss the best solution for your farm!

MORE BULLS FOR YOUR BUCK

115 Bulls sold in our 2024 sale averaged \$5340, with 65 head seling for under \$5000.

With the June sales this year averaging \$11,676 per head, this is another benefit in purchasing a yearling bull.

Everyone in the industry knows that profitability within a cattle system can be improved by making educated predictions with factual data.

It's scientifically proven.

AngusPRO are a group of New Zealand Angus studs that encompass over 40% of New Zealand's registered Angus cattle. These studs have united and made the shift across the ditch, to join the progressive governing body that is Angus Australia.

Angus Australia pride themselves on their quality of leadership in the delivery of innovative programs that will enhance and promote the value of Angus cattle and beef.

ANGUSPURE PARTNER STUD

AngusPure NZ has teamed up with 91 Angus studs who share in our vision - to focus on the end consumer. This stud is proud to be named as one of them, and by using the finest genetics and implementing best management practice they can help you produce more premium quality Angus beef.

Only our AngusPure Partner studs display these devices in their sale catalogues. They indicate bulls endorsed by AngusPure NZ.

A ANGUSPURE ENDORSED BULLS

AngusPure NZ continues to endorse bulls for sale that are either at or above +\$126 for the AngusPure index (API) and at or above \$113 for the AngusPRO index (\$PRO). These indexes give commercial farmers confidence that by using these selection tools, bulls are most likely to leave progeny with superior carcase quality. At the same time, they achieve desirable outcomes for self-replacing herds, as the AngusPure & AngusPRO indexes still reward cattle with strong maternal attributes like calving ease, scrotal and growth, along with carcase weight.

To qualify, bulls will be => +\$126 for AngusPure index OR => +\$113 for AngusPRO index

A+ EXTRA ANGUSPURE ENDORSEMENT FOR MARBLING

In addition to the 'A' and to assist bull buyers who wish to select for more marbling AngusPure is rewarding those animals that are either at or above +\$142 for the AngusPure Index (API) and at or above \$128 for the AngusPRO Index (\$PRO). In addition to this, they must have an IMF EBV (for marbling) equal to or greater than +2.5. These bulls will be awarded an 'A+' endorsement. Marbling is one of the very highest eating quality attributes and is necessary in order to meet some of the highest premium requirements for the export program, AngusPure Special Reserve.

To qualify, bulls will be => +\$142 for AngusPure index OR => +\$128 for AngusPRO index, and in addition all bulls must be => +2.5 for IMF EBV

AngusPure NZ recognises the need to lift the amount of marbling in our New Zealand cow genetics, in order to fill the requirements of consumers going forward. Marbling has two critical components; genetics and feeding. Feeding on a rising plane of nutrition is vital but without the right genetics, these attributes will not be able to express themselves.

40 Yearling Commercial Angus Heifers

Stokman Angus offers a unique opportunity to purchase quality replacement heifers with similar breeding to the bulls offered in the sale. These heifers are an investment for the future. 40 heifers have been selected out of our registered 2024 heifers, and they sell without transfer. They will be sorted into lots of 10 head and we will help arrange trucking for the heifers at the purchasers expense.

THE REMARKABLE BULLS.

In 2024 we sought your prize-worthy bulls to hero them front and centre – they really fill the frame.

These beautiful bulls are worth their weight and more, requiring strong cover on sale day, and solid service every day after that.

That's why we offer existing FMG clients (with an active policy), **14 days free cover** for bulls purchased at any FMG Premier Bull Sale up to the value of \$50,000 per bull, on completion of an Insurance Form.*

Cover can be extended beyond the initial 14 days free cover for the remaining period of 12 months at 7.6% of the purchase price (rates differ for shorter policy periods).

To find out more, talk to your FMG rep, visit fmg.co.nz/contact-us or call us on 0800 366 466.

Left to right: CHAROLAIS - Trudy and AJ McIntyre;
SOUTH DEVON - Richard and Denise Van Asch;
HEREFORD - Jason Hill; ANGUS - Sherson Family (Brian and Sharon Sherson, their son Rob and his wife Tracy).

We're here for the good of the country.

*Offer subject to Livestock Policy terms and exclusions, and underwriting criteria.

FMG
Advice & Insurance

FMG Premier Bull Sale Insurance Form

What is FMG Premier Bull Insurance?

On receiving a completed FMG Premier Bull Sale Insurance form, FMG provides its existing FMG clients with an active policy 14 days free insurance for bulls purchased up to \$50,000. For bulls purchased over \$50,000, please contact an FMG representative.

What is the length of cover?

Your specified bull(s) will be insured for 14 days once you have fully completed this form and it's received by an FMG representative. If you would like a longer period of cover, simply tick the Cover extension box below to extend your Premier Bull Insurance to 12 months. The specified bull(s) is then insured for the next 12 months at **7.6%** of the purchase price. FMG will invoice you for this additional cover.

What are the benefits?

✓ Infertility	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, injury, or illness.
✓ Theft or death	Cover for your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ Vet costs	Cover up to \$500 for treatment of your specified bull to prevent death.

What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Apply

Please fill in this form as soon as you have purchased your new bull(s) and hand it to your FMG representative.

This form **MUST** be fully completed and you have to be an existing FMG client with an active policy to be eligible for the 14 days free Premier Bull Sale Insurance.

Cover extension

☐

Tick here to extend your Bull Insurance to 12 months @ 7.6% of the purchase price of your bull. This will extend the cover beyond the initial 14 days free cover for the remaining period of 12 months.
