Jake, Sherrie and Mark

Jake and Lexie

Craig and Courtney

Cam and Becca

WELCOME TO OUR ANNUAL YEARLING BULL AND HEIFER SALE!

On behalf of Mark, Sherrie, Jake and Lexie we would like to welcome you all to our annual Spring Performance Sale.

2026 has been another one for the record books. We have never seen anything quite like this in our lifetime, and it looks as though these conditions could continue for the next few years. There is a growing appreciation for the quality and integrity of genuine New Zealand beef. People want real food, not fake meat, and that presents an exciting opportunity for our farmers and our beef industry.

On Wednesday, September 16th we will be selling 122 Yearling Angus Bulls and 20 Yearling Angus Replacement Heifers. This will be one of the largest yearling Angus bull sales in NZ this spring, and we offer a great selection of sire groups to pick from.

The first point of profit is a live calf, and as you look through the catalogue, you will see we excel at producing calving-ease, short-gestation sires with above-average growth and carcass merit. The cattle you purchase today are an investment in genetic progress in your herd, and for you to get the most potential out of your investment, we work hard to provide the most accurate data we can. September 16th will be a great opportunity to improve your genetics, with bull and heifer selections.

We HD50K DNA test every registered calf born on the farm for genomics and accuracy, and every bull in sale is Parent Verified. We docility score at weaning and fertility test every bull that goes up for sale.

The 122 bulls in this catalogue represent the most uniform group we have ever raised. They are sired by some of the Angus breed's most proven and respected leading sires.

The 20 heifers have been selected from the registered herd, but sell without transfer. They share the same sires as the bulls, and will sell in pens of 10.

We have continued to thrive in our relationship with Angus Australia, and they are continuously developing new EBV's and indexes, that will improve our cattle selection. If you have problems accessing our data on Angus Australia, please don't hesitate to give us a call so we can help.

Every person on a team plays an important role, and to be successful, everyone contributes their skills, ideas, effort, and support. Jake and Craig are the dream team, they have taken over most of the physical management of the cattle and farm, leaving Mark to fine tune operations, and organize any development work, and of course keep that digger busy. The farm and cattle look a picture, and it is because of the hard work and dedication of everyone involved. Courtney is Sherrie's right hand in running the activities in the sale barn and cabins, and keeps the gardens looking beautiful. Lexie still works for MSD, but every chance she gets, she is out helping Jake, and we so appreciate her.

We look forward to seeing you on September 16th. If we can be of any assistance, or you would like to come look over the cattle ahead of time, please let us know. The coffee pot is always on if you are over our way.

Mark, Sherrie and Jake Stokman

PLEASE BRING THIS CATALOGUE WITH YOU SALE DAY

17th ANNUAL YEARLING SALE

Wednesday 16 September 2026

At the farm - 1708 Te Kopia Road --- 1pm --- Waikite Valley, Rotorua

FOR SALE:

122 Yearling Angus Bulls | 20 Yearling Commercial Angus Heifers

~ Morning tea and lunch provided ~

Inspection of Bulls from 10:30am on sale day or prior with arrangement.

Catalogue can be viewed online at **Stokman Angus Farm** on our website,
on Stokman Angus on facebook or Angus Pro.co.nz

BBSE - Bull Breeding Soundness Evaluation

The bulls listed in this catalogue have met the following parameters that are required to pass the Tararua Breeding Centre Bull Fertility Evaluation carried out on behalf of:

Stokman Angus on 27th August 2026

The bulls listed in this catalogue have been evaluated using the electro-ejaculation or manual manipulation technique by Tararua Breeding Centre and have had the semen assessed by a certified morphologist

SEMEN EVALUATION

Each bull's ejaculate, which is collected by electro-ejaculation or manual manipulation technique, is examined microscopically by a certified Morphologist for Density, Motility, Morphology and must pass the minimum standards of 75% normal at the time of testing.

Signed:

Lucas Reina

EVERY BULL SELLING IN THIS SALE IS FERTILITY TESTED

- make sure the bulls you are purchasing are.

Many are not!

Fertility testing is a cost-effective way to proactively prevent situations of bull failure – a significant cause of dry cows, with up to 10% of yearling bulls being either infertile or subfertile.

Lucas Reina, Tararua Breeding Centre, our fertility testing guru! Have a chat to Lucas on sale day with any questions on fertility testing.

FOR YOUR INFORMATION

THE BENEFITS IN USING STOKMAN YEARLING BULLS IN YOUR BREEDING PROGRAM

All our sale bulls are measured for **birth weight, calving ease, gestation length and docility**, with **HD50K DNA testing** and are **100% parent verification**. Our mature cows are also assessed for **mature cow weight, height and body condition**, which provides us with Mature Body Condition and Mature Cow Height EBV's.

Bulls are **fertility tested, scrotal measured and well grown**, ensuring they are ready to work and suitable for use over both **heifers and mature cows**.

BRINGING YOUR NEW BULL HOME

ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows. Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later. When the young bulls are working, inspect them regularly and closely.

MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability. All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

CONDITIONS OF SALE

1. The sale will be conducted under the usual conditions of NZ Stock Station Agents Association.
2. All intending purchasers are required to register at the sales office prior to the sale.
3. A rebate of 5% will be paid to non-participating livestock companies and agents with approved credit facilities to introduce and/or accompany buyers to the sale. Arrangements must be made with the auctioneer prior to the sale, and settlement made on the buyers behalf within 14 days of sale.
4. This sale will be conducted purchased price plus gst.
5. Each lot shall be at the risk of the purchaser at the fall of the hammer.
6. Retained Interest – Stokman Angus retains a 30% semen share and 30% share of any semen sold on all bulls sold at the sale.
7. Any bull sold requiring a transfer for use in a registered herd will be at a minimum price of \$15,000 plus gst and any associated transfer costs will be charged to the purchaser. The purchaser or agent must state at the fall of the hammer if a transfer is required. For any animal transferred to Angus NZ members, the cost of all fees and genetic tests charge by Angus NZ to import and register the bull from the Australian database at the Purchasers cost.
8. **Structure:** All yearling bulls will be guaranteed for structure for 12 months after sale date. Studs interested in bulls need to check with the vendor whether bulls of interest are transferable. Purchasers must accept that bulls have not fully grown out, such that a full assessment of their structural potential is not possible, and accept that beyond 12 months, the vendor is not liable for structural problems that may arise. Credits for yearling bulls can only be redeemed at a future yearling sale.
9. All cattle become the purchaser's responsibility at the fall of the hammer. Transit and term insurance is recommended and can be purchased with FMG or AON on sale day.
10. Purchasers are requested to please completely fill out the Purchasers instruction Slip at the back of the catalogue, and hand it to the PGG staff at the end of the sale.

Health Status – Stokman Angus has a C10 status.

Bulls – BVD Negative, BVD, Lepto and Covexin vaccinated

Heifers – Lepto and Covexin vaccinated

All animals will get an abamectin drench prior to the sale.

All bulls in this sale are free of known genetic disorders. They are AM, NH, CA and DD Free or Free Untested.

Trucking - We will organize the trucks to deliver the bulls at the buyers expense, and will work to organize them as efficiently and least costly as we can.

OSH – Every effort will be taken by us, our staff to ensure the safety of attending buyers and visitors. However, cattle can be unpredictable, particularly if stressed, mobbed up or in a new environment. Please exercise all reasonable care and attention when viewing the cattle.

HEALTH AND SAFETY

Complying with the Health and Safety in Employment Act 1992 and Health and Safety at Work Act 2015 we are required to advise people of possible hazards. Please be aware of these prior to entering the property to ensure your personal safety.

- Cattle can be unpredictable, especially toward children.
- No children under the age of 15 allowed in the inspection yards.
- Move quietly, be vigilant at all times.
- Wear appropriate footwear and be careful of slippery surfaces.
- Be aware of vehicles and machinery.
- All possible care has been taken in arranging the sale seating, but caution in attaining your seat is still necessary.
- All footwear is to be rinsed in available disinfectant when arriving on the farm.
- Thank you very much for your cooperation! We hope you enjoy the day.

Our bulls are known for their quiet temperament.

OUR BREEDING PHILOSOPHY

Our herd is built on **good mother cows**.

We believe the quality of the female is the foundation of a successful breeding programme. Our cows trace back to some of the great Pathfinder sires of the Angus breed — cattle renowned for producing outstanding females.

A Stokman cow must have the right combination of **femininity, fertility, mothering ability and a moderate frame with plenty of volume**. We place a strong emphasis on functional, productive cows that can perform year after year in our environment.

Temperament is equally important. Any cow with temperament issues is culled. This strict approach has helped establish the reputation for producing **quiet, easy-to-handle bulls** in our annual sale.

Our heifers calve as two-year-olds and must produce a calf every year to remain in the herd. Fertility and longevity are not negotiable.

We also believe in looking beyond the numbers. We won't be swayed into using a bull with outstanding carcass figures if we don't have confidence in the female side of the pedigree. **Good cows produce good bulls**, and the cow behind the bull matters.

Wishing Mark and Sherrie a successful sale

Your NAIT birth tag requirements conveniently matched to a TSU (Tissue Sampling Unit). Allflex easy-to-use TSU gives you accurate DNA parentage.

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Maternal	MCH	cm	Genetic differences between animals in the height of mature females.	Higher EBVs indicate taller mature females.
	MBC	score	Genetic differences between animals in the body condition of mature females.	Higher EBVs indicate more body condition of mature females.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate less curl of the claw set.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more heel depth.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a less angular leg angle.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcase weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate eater profitability.

ANGUSPURE PARTNER STUD

AngusPure NZ has teamed up with 91 Angus studs who share in our vision - to focus on the end consumer. This stud is proud to be named as one of them, and by using the finest genetics and implementing best management practice they can help you produce more premium quality Angus beef.

Only our AngusPure Partner studs display these devices in their sale catalogues. They indicate bulls endorsed by AngusPure NZ.

A ANGUSPURE ENDORSED BULLS

AngusPure NZ continues to endorse bulls for sale that are either at or above +\$131 for the AngusPure index (API) and at or above +\$118 for the AngusPRO index (\$PRO). These indexes give commercial farmers confidence that by using these selection tools, bulls are most likely to leave progeny with superior carcase quality. At the same time, they achieve desirable outcomes for self-replacing herds, as the AngusPure & AngusPRO indexes still reward cattle with strong maternal attributes like calving ease, scrotal and growth, along with carcase weight.

**To qualify, bulls will be => +\$131 for AngusPure index
OR => +\$118 for AngusPRO index**

A+ EXTRA ANGUSPURE ENDORSEMENT FOR MARBLING

In addition to the 'A', and to assist bull buyers who wish to select for more marbling AngusPure is rewarding those animals that are either at or above +\$147 for the AngusPure Index (API) and at or above +\$132 for the AngusPRO Index (\$PRO). In addition to this, they must have an IMF EBV (for marbling) equal to or greater than +2.6. These bulls will be awarded an 'A+' endorsement. Marbling is one of the very highest eating quality attributes and is necessary in order to meet some of the highest premium requirements for the export program, AngusPure Special Reserve.

To qualify, bulls will be => +\$147 for AngusPure index OR => +\$132 for AngusPRO index, and in addition all bulls must be => +2.6 for IMF EBV

AngusPure NZ recognises the need to lift the amount of marbling in our New Zealand cow genetics, in order to fill the requirements of consumers going forward. Marbling has two critical components; genetics and feeding. Feeding on a rising plane of nutrition is vital but without the right genetics, these attributes will not be able to express themselves.

Everyone in the industry knows that profitability within a cattle system can be improved by making educated predictions with factual data.

It's scientifically proven.

AngusPRO are a group of New Zealand Angus studs that encompasses about 40% of New Zealand's registered Angus cattle. These studs are part of the progressive governing body that is Angus Australia.

Angus Australia pride themselves on their quality of leadership in the delivery of innovative programs that will enhance and promote the value of Angus cattle and beef.

anguspro.co.nz

AngusPRO is the collective voice of New Zealand's leading Angus studs, representing about 40% of the country's registered Angus cattle. Our members have united under the progressive governance of Angus Australia, accessing world class genetic evaluation systems and breed development programs that set the global standard for breeding innovation.

Angus Australia's industry leadership provides AngusPRO members and their clients with unparalleled resources, including a support network of over 30 specialist staff, comprehensive educational programs, cutting edge technological tools, extensive research capabilities, and continuous breed development initiatives.

Everyone in the industry knows that profitability within a cattle system can be improved by making educated predictions with factual data. It's scientifically proven. While ensuring cattle are of sound structure and are quiet in nature, the additional use of science and genomics can assist in viewing what's under the skin of an animal, providing an insight into what future progeny will look like, grow like, breed like and essentially, eat like.

Angus cattle are the backbone of New Zealand's beef industry because they're purpose built for our conditions. In the commercial environment, they're expected to survive. Amid winter conditions of driving rain and inches of snow, they will forage and not only survive, but they will thrive. It's in their DNA. AngusPRO genetics demonstrate the resilience, fertility, and efficiency that New Zealand's diverse farming systems demand.

When stud females are mated as heifers, this replicates the commercial farming model and improves overall fertility within the herd. Increased profitability is therefore bred into those progeny, so to speak. EBVs are the best available tool we have in predicting the performance of future progeny, and when stud breeders use technologies such as Zoetis HD50k, the accuracy of EBVs and Indexes is increased.

While increased profitability for commercial farmers drives our breeding decisions, producing exceptional grass-fed eating experiences for consumers remains an equally important focus. New Zealand's premium beef reputation in international markets begins with superior genetics, and AngusPRO members take pride in their role at the start of this quality chain.

Sustainable farming practice isn't a box ticking exercise. It's fundamental to how AngusPRO members operate. Protecting New Zealand's environment, maintaining clear waterways, building soil health, and prioritising animal welfare are non-negotiable standards.

Many of the studs represented by AngusPRO have stood the test of time. They are the perfect synergy of old school reputability and new school technique.

AngusPRO is committed to advancing Angus cattle within New Zealand's beef industry, ensuring commercial farmers have access to quality genetics that deliver profitability, and guaranteeing Angus remains the premium choice for beef consumers worldwide.

Superior Genetics. Proven Performance.

Using Percentiles for Bull Selection

Angus bulls sold within New Zealand are registered in two different databases — Angus Australia (AngusPRO animals) and Angus New Zealand. The TACE percentiles in sale catalogues are only relevant to the population they are compared against, meaning you can compare one AngusPRO animal against another, but these percentiles can't be compared across different breed societies i.e. animals registered with Angus NZ.

It is however, important to note that the TACE EBVs themselves are comparable. For most EBV traits, the direct EBV is comparable to establish expected progeny performance differences, however, where the animal sits in reference to the rest of that population (its ranking) can be substantially different across the Angus Australia and Angus New Zealand societies.

Let's look at the breed average for IMF Angus Australia's 50th percentile is +2.6, whereas Angus NZ's 50th percentile is +1.1 (March TACE analysis). If you're selecting bulls based on percentiles, please ensure you are aware of the population they're compared with, or check the actual EBV figures carefully.

YEARLING BULLS - BEST VALUE FOR YOUR MONEY

At Stokman Angus, it's our duty to provide our clients with bulls that improve year on year. Every registered calf on our farm is HD50K genomic tested and parent verified, giving our clients confidence in the accuracy of the data behind their purchase.

A decade ago, farmers were understandably cautious about buying yearling bulls, as the data available was not considered as reliable or proven as that of a two-year-old bull. Genomic testing has changed the game, delivering a significant improvement in the accuracy of EBVs at a much younger age.

We have found that as our bulls mature, their EBVs generally do not vary greatly from the figures published in our sale catalogue. If anything, they tend to improve. We believe one of the reasons is our use of proven herd sires with thousands of recorded offspring and high-accuracy EBVs behind them. For our clients, this means greater confidence that the young bulls they purchase today have the genetics and performance potential to make a real difference in their herds.

With two-year-old sales averaging more than \$15,500 this year, yearling bulls offer an attractive alternative—providing access to the same or better genetics at a more affordable price, while giving the purchaser another year of productive life.

IT ALL STARTS HERE!

Accurate birthweights and HD50K tissue samples are taken daily during calving, and having quiet attentive cows make weighing and tagging the calves a pleasure.

MORE BULLS FOR YOUR BUCK

MORE BULLS FOR YOUR BUCK

114 bulls sold in our 2025 sale, averaging \$7044 with 44 head selling for \$5000 or under.

With the June 2026 sales averaging over \$15,500 per head, this is another great benefit of purchasing a yearling bull.

Stokman 2025 Sale Results

NEW! Predictions for
cow body condition score
& mature cow height.

Improve your herd faster and with more predictability

THE COST OF THE UNKNOWN

SELL

VS.

THE BENEFIT OF KNOWING

SELL

An innovative genetic test and weekly multibreed genetic
evaluation for commercial cow/calf producers.

Use it to:

- ✔ Inform heifer selection and breeding decisions
- ✔ Benchmark your herd's genetic strengths and weaknesses
- ✔ Identify effective sires and manage inbreeding
- ✔ Better inform bull buying and sire selection decisions

S346 is a Stellar son we retained from our 2021 calf crop the same year we sold the semen rights on Solution. We are more impressed every year with his calves, and he is in the top 2% for CED, 3% for Body Condition, 7% for DTC, 6% for \$A, and top 2% for Angus Pro. His temperament is outstanding, and is a true curve bending sire. He is still actively breeding in the herd, and you'll like his sons in the sale.

Solution has proven himself as a trait leader in Australasia for calving ease, gestation length and birthweight. He is in the top 1% for B Wt, top 2% for Gest Length, and has excellent carcass. Top 6% for \$A and top 5% for Angus Pro. We have his daughters in production now, and they are proving outstanding mothers, have been attentive, but quiet to handle, and we have retained a very nice Mainland son from a Solution heifer this year to use in our herd.

Our Signature semen came last the first year we used him, so only have 3 sons in the sale. He is a calving ease specialist with top 2% B Wt, and 3% CE. Additionally he is in the top 9% for MBC, top 1% for DTC and Scrotal, top 4% for Docility, and top 4% for EMA and 2% for IMF. We like the few calves we got this year, and are really looking forward to next years progeny.

We purchased a few straws of New Ground semen from Cedric Landers when he dispersed his Angus herd, and when Jake was in Australia at Landfall Angus, loved the females out of him, so we sourced more semen, and have calves on the ground now from him for next years sale. He combines excellent phenotype and EBV's, and a very nice maternal pedigree.

REFER-A-BULL CONDITIONS

Following our good mates from Halter's Refer-a-Farmer program, we are offering a \$500 cash payment for each bull sold to a new client referred by a past Stokman client.

The nominated farmer must be a **new buyer to Stokman Angus**, and the Stokman buyer that is referring has to have purchased in our 2024 or 2025 bull sale.

For Refer-a-bull payout with purchase at our **2026 sale**, Stokman Angus must be provided with the following details **prior to the sale**:

- Farmer's full name
- Farmer trading name
- Email address
- Phone number
- Physical/postal address

These details must be provided to Stokman Angus and approved/recorded prior to any eligible purchase being made. \$500 per bull purchased will be credited to the referring farmer's bank account on the 20th October 2026, plus gst. This offer is not available to stock agents.

We thought about retaining this bull, but already had picked another Network son. The cow line is very strong, and produces cookie cutter thick feminine cows. His Granddam is the dam of Lot 4. Amazing set of numbers on this bull.

Congratulations Stokman Angus- 3rd season with Halter

**In a world of increasing challenges,
Halter stands out as the product
helping farmers run more productive
and sustainable operations**

- Improve pasture utilisation, soil health and carrying capacity
- Flexible grazing management with virtual fencing and virtual herding
- Significantly reduce fencing costs and maintenance
- Get constant visibility with real time cattle locations
- Direct to satellite

20 YEARLING COMMERCIAL ANGUS HEIFERS

Stokman Angus offers a unique opportunity to purchase quality replacement heifers with similar breeding to the bulls offered in the sale. These heifers are an investment for the future. 50 heifers have been selected out of our registered 2025 heifers, and they sell without transfer. They will be sorted into lots of 10 head and we will help arrange trucking for the heifers at the purchasers expense.

LOOKING TO THE FUTURE!

We have found that knowing our own bloodlines and the cows behind the bulls, that we have had tremendous success selecting 2 – 3 young bulls from every year to use in our herd. We select new bloodlines that we want to bring into the herd, from specific cow families, and with traits and phenotype that will complement our cowherd.

These bulls might not have the very top EBV's, but they are good, solid sires that will keep our herd moving in the right direction. If we are breeding correctly, the cattle should continue to improve with each generation, and that will benefit our customers.

Semen will be available on these 3 young sires listed below.

Picking out the 3 bulls to retain ourselves this year.

UNLOCKING VALUE WITH MBC AND MCH EBV'S

In the past, producers had little way of knowing whether an animal would mature into a compact, thick-bodied cow or develop into a taller, more leggy type. These EBVs provide valuable insight into mature animal size and body condition, helping producers make more informed breeding decisions.

We believe Mature Cow Body Condition and Mature Cow Height are two highly valuable EBVs for New Zealand cattle producers, giving them greater confidence in selecting animals that will suit their production systems and breeding objectives.

Sherrie's 2nd cousin from Colorado, Amy Scriffiny, did an Internship with us for her Texas University, and we loved having her here.

Jake bringing in cows and calves for weaning.

The strength of our herd is in the cows. And from good cows come good bulls.

BULL-PROOF YOUR ASSETS AGAINST RURAL THEFT.

Theft and burglaries occur more often than you think, and the number of theft claims is increasing.

Every year FMG supports over 1,000 families impacted by theft and burglary. Alarmingly, 1 in 5 clients at rural addresses have been targeted more than once in the same year!

We think now's the time to put a lock on that trend. We have teamed up with NZ Police to create a Rural Crime Prevention Guide to help prevent theft and burglaries at your rural property – find out more at fmg.co.nz/rural-theft

We're here for the good of the country.

FMG Premier Bull Sale Insurance Form

What is FMG Premier Bull Insurance?

On receiving a completed FMG Premier Bull Sale Insurance form from an existing FMG client, FMG provides insurance cover for bulls including theft, death caused by certain accidents, injury, disease, illness or humane destruction and permanent infertility, provided the bull's purchase price does not exceed \$50,000 +GST. Please contact an FMG representative if you are not an FMG client, or you purchased a bull for over \$50,000+GST.

What is the length of cover?

Your specified bull(s) can be insured for up to 12 months on FMG Premier Bull Sale Insurance.

What are the benefits?

✓ Infertility	Cover if your specified bull has to be intentionally slaughtered due to permanent infertility caused by certain accidents, disease, or illness.
✓ Theft or death	Cover for your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ Vet costs	Cover up to \$500 for treatment of your specified bull to prevent death.

What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Apply

Please fill in this form as soon as you have purchased your new bull(s) and hand it to your FMG representative. This form **MUST** be fully completed for Premier Bull Sale Insurance.

DIRECTIONS TO STOKMAN SALE BARN

1708 Te Kopia Road, Waikite Valley, Rotorua
Google Maps: Stokman Angus Farm - Sale Barn

Carcass scanning our heifers gives us accurate data for carcass traits, and we value having Hugh Bolten's expertise.

Sarah Horrocks is usually at the other end of the camera! Thank you Sarah for the amazing skills and passion you put into supporting our Angus Pro members.

In their "spare time", Mark and Sherrie serving Angus Pure to Farm to Farm Tours groups.

Jake and Lexie do get off the farm occasionally!

Karl Weaver, our amazing Veterinarian, at work preg testing.

Courtney and Lexie feeding the crowd.

Craig is not only good with cattle, he's our #1 sheep man.

Amy pacifying the bulls at freeze branding.

Nice fish, Lexie!

Our Gallagher TW-3 makes Jake's record keeping easy and efficient.

Jake and Lexie on tagging duty.

We celebrated a big birthday this year. Noeline turned 90 years young. Say hi when you see her at the sale!

Cam and Becca's family grew for a few months this year - 7 beautiful Border collie pups.

Lexie and Craig microphoning up for Country Calendar. Lookout Hollywood!

Mark with his favorite piece of equipment - think he's ready for an upgrade!

Our favorite Aussies - John and Kate Woodward who came last year to support us at our sale.

See you at the sale!
